

Airvent Systems Ltd

The company was formed in 1988 to provide a professional service facility for smoke ventilation.

The business centres on the Design, Supply, Installation and Commissioning of smoke ventilation and control systems. Emphasis is placed on providing a dedicated design, installation and contract management team for each project.

Our expertise in all aspects of smoke ventilation together with our experience in the service and maintenance field, allows us a unique opportunity to provide fully integrated, aesthetically pleasing, whole life cost effective solutions for both new and refurbishment projects.

Airvent Systems Ltd accept total responsibility for the design and regulatory compliance, working drawings, suitability of products, successful installation and commissioning, together with post contract care with advice and assistance on all aspects of service and maintenance.

Regulatory Compliance

Our 'Design Team' has many years experience in designing systems for all applications and are fully conversant with current and proposed regulations.

Our expertise covers both industrial and commercial projects ranging from simple to complex smoke control design in accordance with BS 5588.

Close liaison with regulating authorities, from the initial concept stage to contract completion, ensures that all projects are completed on time, within budget and comply with all relevant local and national requirements.
